

Maloney QuickSnap™ Linemarker Heads show we have our heads in the right place.

Maloney QuickSnap Linemarker Heads provide a new, unique and cost effective way for underground utility owners and operators to convert out-of-date flat signs incorporating C-channel or U-post supports, or for new installations where metal posts are used. This simple and effective marker conversion is easily accomplished in the field with ordinary hand tools.

Simply remove the obsolete flat sign, or install the new post in the ground the QuickSnap head is shipped fully assembled, with the mounting pucks already installed. Simply align the slot in the bottom puck with the post and press down until fully seated. The internal locking mechanism will prevent disassembly from the post. It's that simple!

For more information
contact Maloney today.

The QuickSnap Linemarker head is made of durable high-density polyethylene.

Text message is hot stamped into the surface (no just painted on) then sealed with a UV-protectant clear coat.

Cap colors are permanent as the color is an integral component of manufacturer.

Its 360-degree surface allows full view from any direction. No metal sign can offer this.

Its low-profile design minimizes sign fatigue from "wind-whip" in turbulent environments.

Adaptable to existing postor to new installations where terrain may require posts.
